DETAILED ACTION

Reasons For Allowance

1. Claims 1-15 are allowed over the prior art record.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, Wylie et al. (U.S Pat. 5,974,329) discloses a method for identifying whether a channel is a LOS channel or a NLOS channel in a mobile communication system, comprising: estimating an average noise power and arrival time of a First Path and the Maximum Path (col. 4 line 66 through col. 5line 10); and detecting whether the arrival time difference between the First Path and the Maximum Path is less than a time interval T (col. 4 lines 39-62).

Baines (U.S Pat. 6,421,334) teaches reading in a power delay profile (col. 2 lines 17-25); and selecting a path with maximum power amplitude, i.e. a Maximum Path, from the power delay profile (col. 2 lines 26-54).

Peterzell et al. (U.S PUB. 2002/0132597) teaches detecting a Local Maximum Path value within a searching window, and detecting whether a power ratio of the Maximum Path to the Local Maximum Path is greater than a threshold K (page 9 [0099]).

However, the prior art made of record, alone or in combination, fails to clearly teach or fairly suggest if the power ratio of the Maximum Path to the Local Maximum

Art Unit: 2618

Path is greater than the threshold K , and simultaneously the arrival time difference between the First Path and the Maximum Path is less than the time interval T , determining the channel being a LOS channel; otherwise determining the channel being a NLOS channel, in combination with other limitations, as specified in the independent claim 1, and further limitations of their respective dependent claims 2-15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
